Contact: Keith Chavin
President

Phone: 919/598-6921

Proj. Value: \$743,000.00

Scope of Services:

- Grading
- Subgrade Preparation
- Sodding
- Material Transportation
- Erosion Control

Project Abstract

This exciting but demanding airport project required a total runway reconstruction to be completed in an extremely short time frame.

For 60 days, our crew worked around the clock, successfully finishing the job to accommodate the 50,000 people expected to gather for a huge air show the weekend after the agreed-upon construction schedule.

On this project, Team Henry was tasked with final grading of approximately 62 acres of final grading, hydro seeding and sodding along the runway and other construction areas.

Additional project activities included placement 29,000 syd of asphalt and 30,000 tons of aggregate.

Associated project activities included providing erosion control . The erosion control activities included silt fence installation, sediment traps and geotextiles.
